

Creating out of the box library services using 100% free open source software (FOSS)

David Oguche CLN
ogucheed@yahoo.com

A presentation at the Library and Information Technology Today (LITT) Workshop held at Godfrey Okoye University, Enugu

What is Open Source

- Open source software is software that users have the freedom to run, distribute, study and modify for any purpose.
- Open source is a collaborative software development method that harnesses the power of peer review and transparency of process to develop code that is freely accessible.
- Open source draws on an ecosystem of thousands of developers and customers all over the world to drive innovation.
- Open Source software is often free of cost, but not always. When talking about Free and Open Source we're talking about Free as in Freedom.
- Open Source is about more than the software it's about those who work with, on, and for the software! What is Open Source

FOSS you probably know of

- ~ web based classrooms membership end user permissions for students teachers and administrators
- ~ Built-in chat rooms and message board
- ~ suitable for supplemented face to face learning

- ~ server installed ~ use of management
- ~ no limits sophie ~ 50 languages
- ~ printable subway versions
- ~ anonymous and not anonymous survey
- ~ open and closed group of participant subways

- ~ open source integrated library system ~ Web-based
- ~ Keyword and advanced / Personalized patron experience
- ~ searching Search filtering by location, item type, subjects and more

- ~ Free group conference call communication

- ~ Research gateway
- ~ Institution Repository

- ~ More secure than Internet explorer
- ~ spyware protection
- ~ frequent updates
- ~ built in rss feeds recognition

- ~ Firefox extension research assistant
- ~ helps you collect, manage and cite research resources.
- ~ allows for note taking includes saved searches centre

- ~ public pc management
- ~ single sign-on integration with koha ILS
- ~ Use to manage public access systems libraries school computer lab retreats and more
